Numbers starting '01' and
'02' are arranged
geographically, with a
specific area code for each
part of the country. Numbers
starting with '03' are not
linked to any particular
location. Calls to these
numbers can be diverted
around the country, to
mobiles or even overseas,
but the cost of calling
stays the same.

There's a mathematical formula for calculating flash guide numbers: $\text{Guide Number} = [\text{Flash to Subject Distance}] \times [\text{F-Stop}]$ Before we dig into some examples, it's important to note the following constant in the equation: ISO. When a guide number is calculated, it is often assumed that the ISO is set to 100, since increased ISO numbers will have an impact on the guide number calculation. Now let's look at some examples.
