Adolescent Substance Abuse - Evidence-Based Approaches to Prevention and Treatment

This review evaluated psychosocial treatments for adolescent substance abuse. The authors concluded that family therapies, group cognitive behavioural therapy and others showed promising results, although there was no evidence to suggest the superiority of any particular intervention.

Evidence-based psychosocial treatments for adolescent substance abuse

Abstract Significant progress has been made since 1990 in the development and evaluation of treatments for adolescent drug abuse. This body of research reflects a greater focus on varying interventions using different theory-based psychotherapies, as well as a recognition of the unique developmental milestones specific to adolescents.

Adolescent Substance Abuse Treatment: A Review of Evidence-Based Approaches

The book discusses the effects of commonly abused substances, from tobacco and alcohol to stimulants and opioids, on the human brain and the various psychosocial routes to their misuse by adolescents. Chapters provide evidence-based guidelines for assessing adolescent treatment needs and review psychological, pharmacological, family, and self-help interventions.

Adolescent Substance Abuse - Evidence-Based Approaches to Prevention and Treatment

There is strong evidence for the efficacy of psychosocial or behavioral interventions in the treatment of adolescent SUDs. As such, evidence-based behavioral interventions should be used as the backbone or platform for treating adolescents with SUDs. Working with parents and families can also improve treatment outcomes. All adolescents who present with substance use or SUDs need to be carefully assessed for co-occurring psychiatric disorders.

Treatment Strategies for Substance Use Disorders in Children and Adolescents

Substance abuse has a major impact on individuals, families, and communities, as its effects are cumulative, contributing to costly social, physical, and mental health problems. We conducted an overview of systematic reviews to evaluate the effectiveness of interventions to prevent substance abuse among adolescents.

Interventions for Adolescent Substance Abuse: An Overview

A study conducted between 2012 and 2014 by the National Institute on Drug Abuse surveyed the use of substances each year by adolescents between the ages of 12 and 17. 1 This study revealed that on average 1: 25% of teenagers used alcohol. 13.3% used marijuana. 10% used tobacco.

MET/CBT: Treatment of Adolescent Substance Abuse

Most adults who develop a substance use disorder report having started drug use in adolescence or young adulthood, so it is important to identify and intervene in drug use early. Adolescents can benefit from a drug abuse intervention even if they are not addicted to a drug. 18 Substance use disorders range from problematic use to addiction and can be treated successfully at any stage, and at any age. For young people, any drug use (even if it seems like only (experimentation)), is cause ...
