Three decades after his death, the life and career of Supreme Court Justice Hugo L. Black continue to be studied and discussed. This definitive study of Black's origins and early influences has been 25 years in the making and offers fresh insights into the justice's character, thought processes, and instincts. Black came out of hardscrabble Alabama hill country, and he never forgot his origins. He was further shaped in the early 20th-century politics of Birmingham, where he set up a law practice and began his political career, eventually rising to the U.S. Senate, from which he was selected by FDR for the high court. Black's nomination was opposed partly on the grounds that he had been a member of the Ku Klux Klan. One of the book's conclusions that is sure to be controversial is that in the context of Birmingham in the early 1920s, Black's joining of the KKK was a progressive act. This startling assertion is supported by an examination of the conflict that was then raging in Birmingham between the Big Mule industrialists and the blue-collar labor unions. Black of course went on to become a staunch judicial advocate of free speech and civil rights, thus making him one of the figures most vilified by the KKK and other white supremacists in the 1950s and 1960s.

Alabama has the largest industrial work force in the South. As a consequence, it also has the most significant labor movement in the region, a movement created in the face of an unusual combination of obstacles, yet, as this book shows, by the 1970s organized labor had established itself as a major economic and political force in Alabama.

Evolution of the Alabama Agroecosystem describes aspects of food and fiber production from prehistoric to modern times. Using information and perspectives from both the "hard" sciences (geology, biology) and the "soft" science (sociology, history, economics, politics), it traces agriculture's evolution from its appearance in the Old World to its establishment in the New World. It discusses how agricultural practices originating in Europe, Asia and Africa determined the path agriculture followed as it developed in the Americas. The book focuses on changes in US and Alabama agriculture since the early nineteenth century and the effects that increased government involvement have had on the country's agricultural development. Material presented explains why agriculture in Alabama and much of the South remains only marginally competitive compared to many other states, the role that limited agricultural competitiveness played in the slower rate of economic development in the South in general, and how those limiting factors ensure that agricultural development in Alabama and the South will continue to keep up but never catch up.
