In this innovative study, Lukas Engelman examines visual traditions in modern medical history through debates about the causes, impact and spread of AIDS. Utilising medical AIDS atlases produced between 1986 and 2008 for a global audience, Engelman argues that these visual textbooks played a significant part in the establishment of AIDS as a medical phenomenon. However, the visualisations risked obscuring the social, cultural and political complexity of AIDS history. Photographs of patients were among the earliest responses to the mysterious syndrome, cropped and framed to deliver a visible characterisation of AIDS to a medical audience. Maps then offered an abstracted image of the regions invaded by the epidemic, while the icon of the virus aspired to capture the essence of AIDS. The epidemic's history is retold through clinical photographs, epidemiological maps and icons of HIV, asking how this devastating epidemic has come to be seen as a controllable chronic condition.

the Atlas of AIDS Co-infection illustrates imaging features and clinical outcomes of AIDS related diseases. The common/uncommon opportunistic infections and malignancies are well covered, including bacterial (e.g. Staphylococcus, Rhodococcus equi), fungal (e.g. Penicillium marneffei, Pneumocystis pneumonia, Pulmonary aspergillosis, Mucormycosis) and mycobacterial infections (Mycobacterium tuberculosis, Non-tuberculous Mycobacteria), lymphoma, as well as AIDS related disease in children with AIDS. Excellent photographs (X-ray and CT imaging) reveal the common imaging features of different diseases in different stages of treatment. Co-infections are common in the late stage of AIDS, consistent with considerable overlap of CT findings that are displayed in one single section and some of the cases in several sections. At last, there are excellent descriptions of differential diagnosis based on the same appearance (e.g. diffuse pulmonary miliary nodules, mediastinal and abdominal lymphadenopathy). Learning variety of different imaging will enrich the radiologists experience and knowledge about AIDS-related diseases, and also help clinicians making timely diagnosis and appropriate optimal treatment. It belongs in the library of each Radiologist, HIV expert and all of who care about Infectious Diseases.
