actions of synthetic C-type natriuretic peptide (CNP). Systemic infusion of CNP (group 1; 10 and 50 ng.kg⁻¹.min⁻¹ iv) resulted in marked cardiovascular hemodynamic effects characterized by a decrease in mean arterial pressure ...

Cardiovascular and renal actions of C-type natriuretic ... Protective cardiovascular and renal actions of vitamin D and estrogen. Gangula PR (1), Dong YL, Al-Hendy A, Richard-Davis G, Montgomery-Rice V, Haddad G, Millis R, Nicholas SB, Moseberry D. Both basic science and clinical studies support the concept that vitamin D deficiency is involved in the pathogenesis of cardiovascular and renal diseases through its association with diabetes, obesity, and hypertension.

Protective cardiovascular and renal actions of vitamin D ...
Since the separation and identification of many different naturally occurring prostaglandins, the cardiovascular actions of these compounds have been investigated in many species. From these studies it has become evident that there are marked qualitative as well as quantitative differences in response between species as well as between various prostaglandins.

system remains complicated, with some evidence that overexpression of ACE2 may have adverse cardiac effects, and ACE2 and its metabolic products may promote epithelial-to-mesenchymal transition. Summary: Repletion of ACE2's activities offers a new strategy to complement current clinical interventions in treating hypertension, renal and cardiovascular disease.
