Abstract. One of the milestones in the history of nuclear physics was the observation by Henri Becquerel in 1896 of the blackening of a photographic plate in the presence of the salts of uranium. 1 This established both the first observation of penetrating radiations from the nucleus and the first method for detecting these radiations. The almost simultaneous observation that the presence of ...

The simplest method for isolating a narrow band of radiation is to use an absorption or interference filter. Absorption filters work by selectively absorbing radiation from a narrow region of the electromagnetic spectrum. Interference filters use constructive and destructive interference to isolate a narrow range of wavelengths.
