Dairy Heifer Management - ScienceDirect.com

Abstract Heifer rearing represents approximately 20 per cent of a dairy farm's total cost, but it is often an area with many potential inefficiencies. There is a lot of scope for veterinarians to be involved in the management of postweaning heifers to help drive performance improvement on dairy farms.

In some years, achieving \$1,200 for a bred heifer is not an issue; however, in other years, it can be nearly impossible. For reference, the average price paid for bred heifers in the U.S. for the month of December, 2019, was \$956/head (USDA AMS National Dairy Comprehensive Report, January 2020). Take Action.

Managing Heifer Inventory on the Dairy | University of ...

After surveying 163 commercial Holstein dairy herds in Pennsylvania, Heinricks and Hargrove (6) observed that heifer growth at 1 and 3 mo has increased over the past 30 yr. They proposed that decreasing average age at first calving nearer to 24 mo is an important management practice and justifies more rapid growth rates of replacement heifers.

Feeding and Management of Dairy Heifers for Optimal ...

Dairy calf management After feed, raising heifer calves is the second largest annual expense for dairy businesses, accounting for approximately 20% of production costs. Heifers produce no income until they reach first lactation and no profit until the second lactation.

Dairy calf management | AHDB

Well-grown dairy calves and heifers play an important role in the future success of all dairy farms. Being able to efficiently raise replacement dairy heifers or create an effective working relationship with a contracted dairy heifer grower is crucial to raising replacements that improve the performance of the dairy herd for years to come.

Dairy Heifer Management: An Issue of Veterinary Clinics ...

Heifers deficient in energy, phosphorus, or vitamin A will not exhibit estrus (heat). First estrus in heifers depends on a combination of size and weight. A general guideline is heifers will show their first estrus at 40 percent of their mature weight, which should be before 12 months of age. Dairy Cow Diseases and Disorders

Dairy Heifer Management An Issue Of Veterinary Clinics ...

Instead, feed heifers daily and push it up regularly. Teaching heifers to slug feed is still a concern at this point, so keeping fresh feed in front of them as much as possible is ideal. Some farms choose to limit feed heifers at this age to try to target nutrient intakes and growth. DeVries said this can work; however, it comes with some challenges.

Feeding heifers from weaning to ... - Progressive Dairy

dairy extension service providers at different level to scale up and sustain the changes brought by the project in the area of dairy cattle management. The module is organized in five chapters/sections. The first chapter provides background for the module. The second & third chapter introduce dairy farm management functions and areas, respectively.

Dairy Farm Management - SNV

There are potential risks associated with contract rearing including a loss of control over the day to day management of replacement heifers, the risk of disease outbreaks and the possibility of heifers performing poorly where the rearer may not have the system or husbandry skills to achieve key performance targets.

DairyGlobal - Contract heifer rearing a vital resource

Heifer mastitis can affect the profitability of dairy farming because of potential long-term effects on udder health and milk production and an associated culling risk, especially when major pathogens are involved. Prevention and control is not easy but is possible through changes in youngstock and heifer management.

MASTITISCONTROL

May 19, 2020. Gavin Duffy, CAFRE Dairy Development Adviser. Rearing dairy herd replacements represents a major investment by dairy producers in the future of their business. In the majority of cases farmers will rear their own heifers on farm but contracting out this responsibility may be an attractive option for some producers.

Contract Dairy Heifer Rearing | CAFRE

At the end of the day, a commitment to select early calving, high-quality replacement heifers is probably the single-most impactful reproductive management practice there is. Be intentional and take ownership of that part of your program. Carson Andersen is a graduate research assistant with the University of Missouri.

Selecting replacement heifers: What are the criteria ...

Nutrition pre-puberty (before 50% mature liveweight) is where skeletal growth is influenced, if R2 heifers are significantly shorter than mature cows pre-calving it will be due to feed management pre-puberty. Energy and protein required (eaten) for maintenance and growth in heifer diets *Energy does not account for energy required for pregnancy
