Umami substance in Kombu dashi and ichiban dashi from a luxurious traditional ryotei restaurant in Kyoto. The umami substance found in kombu dashi is glutamate alone, one of the amino acids, whereas in ichiban dashi, approximately the same amount of the glutamate and inosinate was found.

What is Dashi? | Umami Information Center

Umami was first scientifically identified in 1908 by Kikunae Ikeda, a professor of the Tokyo Imperial University. He found that glutamate was responsible for the palatability of the broth from kombu seaweed. He noticed that the taste of kombu dashi was distinct from sweet, sour, bitter, and salty and named it umami.
