Data modeling occurs at three
levels—physical, logical, and conceptual. A
physical model is a schema or framework
for how data is physically stored in a
database. A conceptual model identifies
the high-level, user view of data. A logical
data model sits between the physical and
conceptual levels and allows for the
logical representation of data to be
separate from its physical storage.

With traditional database management systems, modeling is far from simple. After whiteboarding your initial ideas, a relational database requires you to create a logical model and then force that structure into a tabular, physical model.

Graph Databases for Beginners: The Basics of Data Modeling

Data modeling (data modelling) is the process of creating a data model for the data to be stored in a database. This data model is a conceptual representation of Data objects, the associations between different data objects, and the rules.
