association between two eating behaviours (eating until full and eating quickly) and overweight in a large sample of Japanese adults.<sup>1</sup> The study builds on evidence that eating behaviours are important in promoting positive energy balance (taking in more energy than is expended) and may contribute to the current epidemic of obesity. The drive to overconsume energy when it is available is probably ...

Relationship between stress, eating behavior, and obesity ...

Binge eating disorder (BED) and obesity have common characteristics, but are not necessarily related. BED is an eating disorder that typically starts in late childhood/early adolescence and is a mental health disorder. Obesity, on the other hand, is a physical issue that all ages and populations can struggle with.
