The first handbook of its kind, giving in one volume, etailed information on both the analysis and quality control of fruit and vegetable products. Authoritative, need-based and up-to-date, the book has been principally designed to meet the day-to-day requirements.Starting from the analysis of common constituents, the book covers methods of analysis of specific raw materials and containers used in processing measurement of different quality attributes, sensory evaluation, microbiological and microanalytical examinations, determination of thermal process time, and examination of specific fruit and vegetable products. The last few chapters are devoted to statistical quality control, preparation of standard solutions and tables required for day-to-day use. Sufficient theoretical information is included in each chapter before the methods are described. Each method is self-contained, easy to follow, time-tested and complete in all respects. Wherever needed, reference values or standards-PFA, ISI or FAO/WHO Codex Alimentarius are given. With its comprehensive coverage and up-to-date information, the book would be useful to public analysts, factory personnel, processors, research workers, and students of food science, food technology, agriculture and home science.

Proximate composition; Pectin; Polyphenols; Plant pigments; Ascorbic acid; Minerals; Examination of canned products; Tomato products; Dehydrated fruits and vegetables; vinegar; Chemical additives; Colour measurement; Measurement of consistency; Sensory evaluation; Miscellaneous methods; Water analysis; Tinplate and lacquers; Double seaming - adjustment and examination; General instructions in microbiological examination; Microbiological examination of spoilage; Micro-analytical examination for extrancous matter; Bacteriological examination of water; Determination of thermal process time; assessment of surface sanitation; Standard solutions; Tables.

Handleiding voor kwaliteitsbewaking bij de conservering van groenten en vruchten op de volgende procesonderdelen: inblikken, dehydratatie, invriezen, zuren, sirooptoevoeging, kristallisering en chemische bewaring

Proximate composition; Pectin; Polyphenols; Plant pigments; Ascorbic acid; Minerals; Examination of canned products; Tomato products; Dehydrated fruits and vegetables; Vinegar; Chemical additives; Colour measurement; Measurement of consistency; Sensory evaluation; Miscellaneous methods; Water analysis; Tinplate and lacquers; Double seaming - adjustment and examination; General instructiuons in microbiological examination; Microbiological examination of spoilage; Micro-analytical examination for extraneous matter; Bacteriological examination of water; Determination of thermal process time; Assesment of surface sanitation; Standard solutions.

The processing of food is no longer simple or straightforward, but is now a highly inter-disciplinary science. A number of new techniques have developed to extend shelf-life, minimize risk, protect the environment, and improve functional, sensory, and nutritional properties. The ever-increasing number of food products and preservation techniques cr

Acting as chemical messengers for olfactory cells, food flavor materials are organic compounds that give off a strong, typically pleasant smells. Handbook of Fruit and Vegetable Flavors explores the flavor science and technology of fruits and vegetables, spices, and oils by first introducing specific flavors and their commercialization, then detailing the technical aspects, including biology, biotechnology, chemistry, physiochemistry, processing, analysis, extraction, commodities, and requirements for application as food additives. With chapter authors representing more than ten different countries, this handy reference provides a comprehensive view of this evolving science.

Best practices for preserving quality and consumer appeal of fresh fruits, vegetables Clarifies calculations for efficient cooling, controlled ripening and storage Presents strategies for reducing microbial risks and post-harvest pathologies A comprehensive introduction to established and emergent post-harvest technologies, this text shows how to enhance the value of perishable fruits and vegetable by mitigating the causes of deterioration and spoilage from farm to point of purchase. After investigating the structural, chemical and nutritional properties of fruits and vegetables, the book provides a step-by-step explanation of processing from machine harvesting through handling, ripening technologies, packaging and distribution. Emphasis is placed on ways to collect data needed to monitor quality. Psychrometric principles and their role in cold storage systems are presented along with calculations enabling effective refrigeration and control of transpiration, humidity and gases. The book includes examples and calculations for improving process control and predicting the shelf-life of temperate-climate and tropical fruits and vegetables.

Postharvest Disinfection of Fruits and Vegetables describes available technologies to reduce microbial infection for maintaining postharvest quality and safety. The book analyzes alternative and traditional methodologies and points out the significant advantages and limitations of each technique, thus facilitating both cost and time savings. This reference is for anyone in the fresh produce industry who is involved in postharvest handling and management. It discusses, in detail, the latest disinfection approaches, low-cost treatment strategies, management and protocols to control fresh produce qualiiies, diseases and insect infestation. Includes methods to reduce microbial contamination using chlorination, ozone, pulsed light, irradiation and plasma technology Provides practical applications of recently developed, natural anti-microbial agents for eco-friendly and sustainable solutions Explores various disinfection technologies for quality assurance and for the development of potential new technologies
