You may be looking for Intensive Care Medicine (journal), Critical Care Medicine (journal), Intensive Care or CICU-FM. Intensive care medicine, also called critical care medicine, is a medical specialty that deals with seriously or critically ill patients who have, are at risk of, or are recovering from conditions that may be life-threatening.

An experienced doctor offers a behind-the-scenes picture of an Intensive Care Unit in a large city hospital, presenting true accounts of the patients, doctors, nurses, and medical students who cope with life-affecting decisions every minute of every day.

Intensive Care is an affecting view from the trenches, a seasoned doctor's minute-by-minute and day-by-day account of life in the Intensive Care Unit (ICU) of a major inner-city hospital, San Francisco General. John F. Murray, for many years Chief of the Pulmonary and Critical Care Division of the hospital and a Professor at the University of California, San Francisco, takes readers on his daily ward rounds, introducing them to the desperately ill patients he treats as well as to the young physicians and medical students who accompany him.

A world-renowned critical-care doctor offers hope for patients, their families, and the future of medicine in this timely, urgent, and compassionate work about the devastating and little-known physical and emotional effects of ICU stays. As COVID-19 survivors are discharged from hospitals, grateful to be alive, most don't realise that the hardest part of their battle may be about to begin. Many will return home and struggle with long-term physical, mental, and emotional problems either caused or exacerbated by the life-saving treatment they received in intensive care. They'll join the ranks of critical-care survivors whose lives are completely upturned by a hospital stay. More than half of the patients admitted to ICUs will struggle with post-intensive care syndrome, which can include Alzheimer's-like cognitive deficits, PTSD, muscle and nerve damage, and depression. Their personal and professional lives can suffer irreparably. Worst of all, no one seems to understand that they have an illness at all. Not even their doctors. Dr Ely is now a leader in the field of ICU survivorship — advocating for compassionate care in the technology-driven enclave of the modern ICU — especially relevant during the coronavirus pandemic. In Every Deep-Drawn Breath, Dr Ely sounds a warning for the millions of people who will be admitted to ICUs in coming years and a wake-up call for healthcare professionals — himself included — to turn their gaze from the latest life-saving machines to really see, as he says, 'the person in the patient'.

The New York Times bestselling author of Being Mortal and Complications reveals the surprising power of the ordinary checklist We live in a world of great and increasing complexity, where even the most expert professionals struggle to master the tasks they face. Longer training, ever more advanced technologies—neither seems to prevent grievous errors. But in a hopeful turn, acclaimed surgeon and writer Atul Gawande finds a remedy in the humblest and simplest of techniques: the checklist. First introduced decades ago by the U.S. Air Force, checklists have enabled pilots to fly aircraft of mind-boggling sophistication. Now innovative checklists are being adopted in hospitals around the world, helping doctors and nurses respond to everything from flu epidemics to avalanches. Even in the immensely complex world of surgery, a simple ninety-second variant has cut the rate of fatalities by more than a third. In riveting stories, Gawande takes us from Austria, where an emergency checklist saved a drowning victim who had spent half an hour underwater, to Michigan, where a cleanliness checklist in intensive care units virtually eliminated a type of deadly hospital infection. He explains how checklists actually work to prompt striking and immediate improvements. And he follows the checklist revolution into fields well beyond medicine, from disaster response to investment banking, skyscraper construction, and businesses of all kinds. An intellectual adventure in which lives are lost and saved and one simple idea makes a tremendous difference, The Checklist Manifesto is essential reading for anyone working to get things right.

Most Americans, when pressed, have a vague sense of how they would like to die. They may imagine a quick and painless end or a gentle passing away during sleep. Some may wish for time to prepare and make peace with themselves, their friends, and their families. Others would prefer not to know what's coming, a swift, clean break. Yet all fear that the reality will be painful and prolonged; all fear the loss of control that could accompany dying. That fear is justified. It is also historically unprecedented. In the past thirty years, the advent of medical technology capable of sustaining life without restoring health, the expectation that a critically ill person need not die, and the conviction that medicine should routinely thwart death have significantly changed where, when, and how Americans die and put us all in the position of doing something about death. In a penetrating and revelatory study, medical anthropologist Sharon R. Kaufman examines the powerful center of those changes -- the hospital, where most Americans die today. In the hospital world, the deep, irresolvable tension between the urge to extend life at all costs and the desire to allow "letting go" is rarely acknowledged, yet it underlies everything that happens there among patients, families, and health professionals. Over the course of two years, Kaufman observed and interviewed critically ill patients, their families, doctors, nurses, and other hospital staff at three community hospitals. In...And a Time to Die, her research places us at the heart of that science-driven yet fractured and often irrational world of health care delivery, where empathetic yet frustrated, hard-working yet constrained professionals both respond to and create the anxieties and often inchoate expectations of patients and families, who must make "decisions" they are ill-prepared to make. Filled with actual conversations between patients and doctors, families and hospital staff,...And a Time to Die clearly and carefully exposes the reasons for complicated questions about medical care at the end of life: for example, why "heroic" treatment so often overrides "humane" care; why patients and families are ambivalent about choosing death though they claim to want control; what constitutes quality of life and life itself; and, ultimately, why a "good" death is so elusive. In elegant, compelling prose, Kaufman links the experiences of patients and families, the work of hospital staff, and the ramifications of institutional bureaucracy to show the invisible power of the hospital system itself -- its rules, mandates, and daily activity -- in shaping death and our individual experience of it. ...And a Time to Die is a provocative, illuminating, and necessary read for anyone working in or navigating the health care system today, providing a much-needed road map to the disorienting territory of the hospital, where we all are asked to make life-and-death choices.

In this volume, John Lantos weaves a story that captures the dilemmas of modern medical practice. He draws on his experience in neonatal medicine, paediatrics and medical ethics to explore ethical dilemmas through one poignant representative situation.
