It has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events. It is not that the facts of history have changed. No one will dispute that the battle of Waterloo occurred on June 11, 1815 or that the allied invasion of Europe began on June 6, 1944. What each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual, social, intellectual, and cultural milieu of their own generation. By examining the facts of history from a new perspective, today's historians hope to reveal some new truth that will not only illuminate the course of history but also validate contemporary values and societal ideals. Although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns, inventory replenishment, and income statements, the goal of the management scientist, like the historian, is to merge the facts and figures of the discipline with today's organizational, cultural, and economic realities. Hopefully, the result will be a new

synthesis, where a whole new perspective will break forth, exposing new directions and opportunities.

When work began on the first volume of this text in 1992, the science of distribution management was still very much a backwater of general management and academic thought. While most of the body of knowledge associated with calculating EOQs, fair-shares inventory deployment, productivity curves, and other operations management techniques had long been solidly established, new thinking about distribution management had taken a definite back-seat to the then dominant interest in Lean thinking, quality management, and business process reengineering and their impact on manufacturing and service organizations. For the most part, discussion relating to the distribution function centered on a fairly recent concept called Logistics Management. But, despite talk of how logistics could be used to integrate internal and external business functions and even be considered a source of competitive advantage on its own, most of the focus remained on how companies could utilize operations management techniques to optimize the traditional day-to-day shipping and receiving functions in order to achieve cost containment and customer fulfillment objectives. In the end, distribution management was, for the most part, still considered a dreary science, concerned with

of transportation rates and cost trade-offs. expediting and the tedious calculus Today, the science of distribution has become perhaps one of the most important and exciting disciplines in the management of business.

In today's globalised economic development, international transactions form an integral part of economic activities. Logistics Management encompasses planning and management of all activities, involving sourcing and procurement of cargo by effective and economically feasible coordination and collaboration with channel partners, and provision of product and service packages from point-of-origin to point-of-consumption at the right time and at the right place. This book gives, with theoretical and practical expertise, a comprehensive coverage of the logistic concepts, techniques, and their applications in the world cargo industry. Besides, it provides an in-depth understanding of the strategic framework of Logistics Management, the technologies, and the components used in logistic operations. It also covers export-import trade and documentations, shipping formalities, warehouse and inventory management, ERP concepts, logistics operation of major ports—and more. Key Feature : Case Studies are provided at the end of most chapters, which tend a practical orientation to the subject. This book is primarily intended as a text for postgraduate

students of Management (MBA/MIB) and Commerce (M.Com.IB). It will also prove useful for the students of those engineering disciplines where the subject is prescribed as an elective course. In addition, practising managers in international business will find the book valuable as a reference

Physical Distribution is a distinct but integral part of business logistics, involving all those activities relating to the physical movement of goods from the factory to the consumer. Recently, the concept has been expanded to supply chain management which enables better customer relationship with smooth supply of goods. This introductory text is focused on the essential concepts, tools and strategies that comprise Distribution Management. It emphasizes the idea that distribution management is an effective marketing strategy and a potent competitive tool. Defining the concept of physical distribution in the initial chapter, the book then describes in detail the objectives, functions and components of all the activity centres of physical distribution in the Indian context, from a systems approach. An exclusive chapter is devoted to transportation functions, highlighting the features of interstate movement of goods and the

legal procedures related to them. Sufficient coverage is also given to related topics such as distribution control, performance evaluation and organization of physical distribution, besides the 'trade-off' concept. The book, with its wide coverage of topics, should prove to be of immense value to undergraduate students in Business Administration and Business Management.

Passenger transport, the movement of people, is an important and integral part of human being's life. It is greatly influences every one's life-style. Much of the World's civilisation, culture, advancement, and structure have been affected by the passenger transport because of its intrinsic capacity to penetrate deep into the hinterland will contribute more for the attainment of the good of balanced economic development.

This is a multi-author volume resulted from an international conference focusing on topics related to our understanding of the role of China in the global history. Apart from introductory chapters exploring methodological issues and providing big pictures of framing China in the world in particular time zones, this volume also covers rich discussions on the following themes from the ancient period to the twentieth century: organized water transport, cultural

interactions, navigators, port cities, smuggling activities, customs service, foreign relations, migration, and diasporas. Written by scholars of different generations who are based in diverse regions including Canada, Hong Kong, Japan, Singapore, Taiwan, the UK and the US, the chapters in this volume either address old questions from new perspectives, or table new topics that were largely ignored in previous scholarship. Some go further to brainstorm possible research directions in the future. This thought-provoking volume will be beneficial to readers who are interested in rethinking China's position in the global historical stage against the backdrop of Post-Orientalism.
