dissipation in quantum mechanics In classical physics damping may often be described by introducing a velocity proportional term in the equation of motion. For a damped harmonic oscillator with mass M and frequency ω_0 one has $M \ddot{q} + 2\gamma \dot{q} + \omega_0^2 q = 0$; (4.1) where q is the position of the oscillator and

~~Dissipative Quantum Systems~~

The dissipative two-level system is a particular realization of the Caldeira – Leggett model that deserves special attention due to its interest in the field of quantum computation. The aim of the model is to study the effects of dissipation in the dynamics of a particle that can hop between two different positions rather a continuous degree of freedom.
