Immediately following the Civil War, the United States Ordnance Department reported it had purchased 128,575 Remington revolvers during the conflict. During the Franco-Prussian War in 1870-71, Samuel Remington acted as an agent to acquire arms for the French War Ministry. Fifteen to twenty thousand Remington New Model Army revolvers were purchased from the Ordnance Department and sent to France. factory's records, and Army and Navy records to assemble this detailed examination of the development and evolution of Remington revolvers from the beginning of the Civil War through the end of the Indian wars. In addition to information about the revolvers themselves, Ware shares tidbits that he uncovered along the way. For example, part of the equipment issued the Civil War soldier was a bullet mold for his revolver. During the War, the Ordnance Department issued combustible ammunition for revolvers, making the mold a superfluous appendage. To avoid carrying the extra weight, the mold was usually tossed away. In 1863 the Ordnance Department notified Remington there was no need to furnish molds with the revolvers and therefore saved the government eighteen cents on each revolver. "The Remington Society of

patents that created monopolies in revolver production and the through-bored cylinder necessary for self-contained metallic cartridges. The caplock revolvers took on a separate evolution and remained state of the art long after the widespread appearance of cartridge firing rifles and shotguns. They rode in the holsters of explorers and adventures across the world and granted safe conduct in the back alleys of industrial slums right up until the last quarter of the 19th Century. Handguns possess a mystique distinctly different from that of other firearms. They are tools of personal empowerment-chosen by their owners to provide independence and freedom of movement. In the ambitious, optimistic early years of western industrial civilization they were the emblem of liberty and equality and the bane of

The NRA steadfastly maintains that the 30,000 gun-related deaths and 300,000 assaults with firearms in the United States every year are a small price to pay to guarantee freedom. As former NRA President Charlton Heston put it, "freedom isn't free." And when gun enthusiasts talk about Constitutional liberties guaranteed by the Second

Amendment, they are referring to freedom in a general sense, but they also have something more specific in mind---freedom from government oppression. They argue that the only way to keep federal authority in check is to arm individual citizens who can, if necessary, defend themselves from an aggressive government. In the past decade, this view of the proper relationship between government and individual rights and the insistence on a role for private violence in a democracy has been co-opted by the conservative movement. As a result, it has spread beyond extreme "militia" groups to influence state and national policy. In *Guns, Democracy, and the Insurrectionist Idea*, Josh Horwitz and Casey Anderson reveal that the proponents of this view base their argument on a deliberate misreading of history. The Insurrectionist myth

has been forged by twisting the facts of the American Revolution and the founding of the United States, the denial of civil rights to African-Americans after the Civil War, and the rise of the Third Reich under Adolf Hitler. Here, Horwitz and Anderson set the record straight. Then, challenging the proposition that more guns equal more freedom, they expose Insurrectionism---not government oppression---as the true threat to freedom in the U.S. today. Joshua Horwitz received a law degree from George Washington University and is currently a visiting scholar at the Johns Hopkins Bloomberg School of Public Health. He is Executive Director of the Coalition to Stop Gun Violence and the Educational Fund to Stop Gun Violence. He has spent nearly two decades working on gun violence prevention issues. He lives in

At a time of renewed debate over guns in America, what does the Second Amendment mean? This book looks at history to provide some surprising, illuminating answers. The Amendment was written to calm public fear that the new national government would crush the state militias made up of all (white) adult men -- who were required to own a gun to serve. Waldman recounts the raucous public debate that has

surrounded the amendment from its inception to the present. As the country spread to the Western frontier, violence spread too. But through it all, gun control was abundant. In the 20th century, with Prohibition and gangsterism, the first federal control laws were passed. On all four occasions, the Supreme Court ruled against a constitutional right to own a gun. The present debate picked up in the 1970s -- part of a backlash to the liberal 1960s and a resurgence of libertarianism. A newly radicalized NRA entered the campaign to oppose gun control and elevate the status of an obscure constitutional provision. In 2008, in a case that reached the Court after a focused drive by conservative lawyers, the US Supreme Court ruled for the first time that the Constitution protects an individual right to gun ownership. Famous for his

theory of "originalism," Justice Antonin Scalia twisted it in this instance to base his argument on contemporary conditions. Waldman shows that our view of the amendment is set, at each stage, not by a pristine constitutional text, but by the push and pull, the rough and tumble of political advocacy and public agitation.

Our efforts to develop munitions to the point where our armies could cope on equal terms with those of potential enemies are covered here in this, the first of three projected volumes on the history of the Ordnance Department in World War II. How well the Ordnance Department succeeded in matching the Germans in quality continues to be a matter of debate both within the Ordnance Department itself, and between the using arms and the Department. That the battle of quantity was won-with the help of a superb industrial machine-can hardly be denied. This volume, the result of diligent research by Dr. Constance McL. Green and her associates, should interest not only military men but also scientists, industrialists,

Among other things, it shows the urgent necessity of a directed, continuous, and intensive research program and the danger in failing to recognize and profit by developments abroad. Also shown is the inherent time interval between the drawing board and the production of the end item in quantity."
