of L {Fs L{ f () } L {Fs L Laplace transform is named in honour of the great French mathematician, Pierre Simon De Laplace (). Like all transforms, the Laplace transform changes one signal into another according to some fixed set of rules or equations. The best way to convert differential equations into algebraic equations is the use of Laplace transformation.

Laplace Transform Pairs of N-Dimensions Eq. 1) where s is a complex number frequency parameter $s = \sigma + j\omega$, with real numbers σ and ω . An alternate notation for the Laplace transform is $L\{f\}$ instead of F . The meaning of the integral depends on types of functions of interest. A necessary condition for existence of the integral is that f must be locally ...

Laplace transform - Wikipedia The Laplace Transform is derived from Lerch 's Cancellation Law. In the Laplace Transform method, the function in the time domain is transformed to a Laplace function in the frequency domain. This Laplace function will be in the form of an algebraic equation and it can be solved easily.
