The cosmic view of Albert Einstein: Writing on art, science and peace by Walt Martin and Magda Ott is mediocre at best. The book is comprised of various dribs and drabs of Einsteins thoughts on various topics suggesting he believed in a natural religion as opposed to one based on anthropomorphic revelation.

Einstein was a brilliant man, but he was clueless about God. I admire his pacifism and his humanitarianism. He said that moral teaching was more important than scientific theory. But believing that God is merely some unknowable cosmic force doesn't have any basis in either science or theology.

Albert Einstein, 1921 Albert Einstein's religious views have been widely studied and often misunderstood.

Albert Einstein stated that he believed in the pantheistic God of Baruch Spinoza. He did not believe in a personal God who concerns himself with fates and actions of human beings, a view which he described as naïve.

Science and religion are compatible, declares the famous physicist. In these essays, Einstein views science as the basis for a "cosmic" religion, embraced by all who share a sense of wonder in the rationality and beauty of the universe. Additional topics include pacifism, disarmament, and Zionism. Appreciation by George Bernard Shaw.

Combining accounts of rationalists' spiritual awakenings and consciousness explorations by philosophers, neuroscientists, and mystics within a framework of the history of science and religion, Kripal compellingly signals a path to mending our fractured world. Searching for Dark Matter with Cosmic Gamma Rays summarizes the evidence for dark matter and what we can learn about its particle nature using cosmic gamma rays. It has almost been 100 years since Fritz Zwicky first detected hints that most of the matter in the Universe that doesn't directly emit or reflect light. Since then, the observational evidence for dark matter has continued to grow. Dark matter may be a new kind of particle that is governed by physics beyond our Standard Model of particle physics. In many models, dark matter annihilation or decay produces gamma rays. There are a variety of instruments observing the gamma-ray sky from tens of MeV to hundreds of

TeV. Some make deep, focused observations of small regions, while others provide coverage of the entire sky. Each experiment offers complementary sensitivity to dark matter searches in a variety of target sizes, locations, and dark matter mass scales. We review results from recent gamma-ray experiments including anomalies some have attributed to dark matter. We also discuss how our gamma-ray observations complement other dark matter searches and the prospects for future experiments.

Author of the viral Medium piece, "Poor and Traumatized at Harvard," Due Quach shares her Calm Clarity program to show readers how to deal with toxic stress and adversity. We often don't realize how much control we have over our thoughts, feelings,

and actions--on some days, the most minor irritation can upset us, but on others, we are in our best form and can rise to challenges with grace.

These fluctuations depend on the neural networks firing in our brains, and we have the power to consciously break hardwired thought patterns. Due Quach developed an intimate understanding of the brain during her personal journey of healing from post-traumatic stress disorder. According to Quach, people function in three primary emotional states: Brain 1.0, Brain 2.0, and Brain 3.0. In Brain 1.0, people act out of fear and self-preservation. Brain 2.0 involves instant gratification and chasing short-term rewards at the expense of long-term well-being. Brain 3.0 is a state of mind that Quach calls "Calm Clarity," in which people's actions are aligned

with their core values. As Quach confronted PTSD and successfully weaned herself off medication, she learned how to activate, exercise, and strengthen Brain 3.0 like a muscle. In *Calm Clarity*, she draws on the latest scientific research and ancient spiritual traditions alike to show us how we too can take ownership of our thoughts, feelings, and actions in order to be our best selves.
