This open access book is a thorough update and expansion of the 2017 edition of The Handbook of Salutogenesis, responding to the rapidly growing salutogenesis research and application arena. Revised and updated from the first edition are background and historical chapters that trace the development of the salutogenic model of health and flesh out the central concepts, most notably generalized resistance resources and the sense of coherence that differentiate salutogenesis from pathogenesis. From there, experts describe a range of real-world applications within and outside health contexts. Many new chapters emphasize intervention research findings. Readers will find numerous practical examples of how to implement salutogenesis to enhance the health and well-being of families, infants and young children, adolescents, unemployed young people, pre-retirement adults, and older people. A dedicated section addresses how salutogenesis helps tackle vulnerability, with chapters on at-risk children, migrants, prisoners, emergency workers, and disaster-stricken communities. Wide-ranging coverage includes new topics beyond health, like intergroup conflict, politics and policy-making, and architecture. The book also focuses on applying salutogenesis in birth and neonatal care clinics, hospitals and primary care, schools and universities, workplaces, and towns and cities. A special section focuses on developments in salutogenesis methods and theory. With its comprehensive coverage, The Handbook of Salutogenesis, 2nd Edition, is the standard reference for researchers, practitioners, and health policy-makers who wish to have a thorough grounding in the topic. Comprehensive resource that focuses on the origins of health rather than the origins of disease (pathogenesis). It traces the history and development of the Salutogenic Model, from Aaron Antonovsky's groundbreaking scholarship to the present day. The book examines the key concept of salutogenesis, Sense of Coherence (SOC) and the factors that mediate SOC and health. Bringing together leading scholars from the International Union for Health Promotion and Education (IUHPE), this book aims to answer the question: where has over three decades of research and scholarship brought the Salutogenic Model of Health? Chapters look at the role of culture in the development of salutogenesis and the development of SOC over the life course. A key section summarizes the research in salutogenesis in the non-English literature and a section on research resources contains information on salutogenesis bibliographies, databases, organizations and web sites.

This unique and comprehensive handbook examines the various models of stress, coping, and health and their relevance for nursing and related health fields. Building on the first edition that has been highly-praised for its analysis and critique of existing models and its discussion of new research surrounding self-regulation and stress, this Second Edition continues to provide a critical analysis of the field while providing up to date cutting-edge research. Under the expert editorship of Dr. Virginia Hill Rice, experienced scholars and practitioners present a broad range of issues and research that relate to stress and health, such as response-oriented stress; stimulus-oriented stress; and transactional stress, coping, and health in children, adolescents, attitudes, and much, much more.

Yhteenveto: Koherenssin rakenne, pysyvyys ja terveyttä edistävä merkitys työelämässä.

This book develops a new model of the genesis of health, on the basis of the interplay between genetic and environmental factors. Hurrelmann and Richter build upon the basic theories of health and the popular model of salutogenesis to offer a comprehensive interdisciplinary theory of health genesis and success: Productive Processing of Reality (PPR). The authors show that health is the lifelong dynamic process of dealing with the internal reality of physical and psychological impulses and the external reality of social and material impulses. To demonstrate this, the book is split into three interconnected parts. Part A analyses the determinants of health, providing an overview of the insights of current research and the impact of socioeconomic influences and gender on health. Part B covers public health, social, learning and coping theories, all of which understand health as an interaction between people and their environment. Part C draws on these four theories to outline PPR, stressing the interrelation between physical and mental constitution and the demands of the social and mental environment, and suggesting strategies for coping with these demands during the life course. *Understanding Public Health: Productive Processing of Internal and External Reality* will be valuable reading for students and researchers in psychology, sociology, educational science, public health and medical science, and for policymakers in public health.

This handbook includes state-of-the-art research on love in classical, modern and postmodern perspectives. It expands on previous literature and explores topics around love from new cultural, intercultural and transcultural approaches and across disciplines. It provides insights into various love concepts, like romantic love, agape, and eros in their cultural embeddedness, and their changes and developments in specific cultural contexts. It also includes discussions on postmodern aspects with regard to love and love relationships, such as digitalisation, globalisation and the fourth industrial revolution. The handbook covers a vast range of topics in relation to love: aging, health, special needs, sexual preferences, spiritual practice, subcultures, family and other relationships, and so on. The chapters look at love not only in terms of the universal concept and in private, intimate relationships, but apply a broad concept of love which can also, for example, be referred to in postmodern workplaces. This volume is of interest to a wide readership, including researchers, practitioners and students of the social sciences, humanities and behavioural sciences. In the 1970s through the 90s, I was told that globalization was homogenizing cultures into a worldwide monoculture. This volume, as risky and profound as the many adventures of love across our multiplying cultures are, proves otherwise. The authors' revolutionary and courageous work will challenge our sensibilities and expand the boundaries of what we understand what love is. But that's what love does: It communicates what is; offers what can be; and pleads for what must be. I know you'll enjoy this wonderful book as much as I do! Jeffrey Ady, Associate Professor (retired), Public Administration Program, University of Hawaii at Manoa, Founding Fellow, International Academy for Intercultural Research The International Handbook of Love is far more than a traditional compendium. It is a breath-taking attempt to synthesize our anthropological and sociological knowledge on love. It illuminates topics as diverse as Chinese love, one-night stands, teen romance or love of leaders and many more. This is a definitive reference in the field of love studies. Eva Illouz, author of *The End of Love: A sociology of Negative relationships*. Oxford University Press.
