Large intestine: Anatomy, blood supply and innervation ...

The large intestine starts in the right iliac region of the pelvis, just at or below the right waist, where it is joined to the bottom end of the small intestine. It is about 4.9 feet (1.5 m) long, which is about one-fifth of the whole length of the intestinal canal. The appendix is attached to its inferior surface of the cecum.

The Large Intestine | Boundless Anatomy and Physiology

The large intestine starts in the right iliac region of the pelvis, just at or below the right waist, where it is joined to the bottom end of the small intestine. It is about 4.9 feet (1.5 m) long, which is about one-fifth of the whole length of the intestinal canal.

22.11A: Anatomy of the Large Intestine - Medicine LibreTexts

The large intestine is held in place and attached to the abdominal wall by a sac-like structure called the mesentery. The mesentery also supplies the large intestine with blood from the superior and inferior mesenteric arteries. Histology. Like the rest of the digestive system, the large intestine is comprised of four layers.

Large Intestine - Location, Anatomy, Diagram, Structure ...

The large intestine, also known as the large bowel, is the last part of the gastrointestinal tract and of the digestive system in vertebrates. Water is absorbed here and the remaining waste material is stored as feces before being removed by defecation. The colon is the largest portion of the large intestine, so many mentions of the large intestine and colon overlap in meaning whenever precision is not the focus. Most sources define the large intestine as the combination of the cecum, colon, rec

Large intestine - Wikipedia

The large intestine also known as the colon, extends from the distal end of the ileum to the anus, a distance of approximately 1.5 m in adults (5 ft) long, making up one-fifth of the length of the gastrointestinal (GI) tract and 6.5 cm (2.5 in.) in diameter. The large intestine is named for its relatively large diameter, not its length.

Large Intestine Anatomy, Function, Location, Length and ...

Large Intestine Structure and Anatomy. The large intestine starts from the ileocecal sphincter present at the end of the ileum. It then forms an inclined T which runs both superiorly and inferiorly. The superior part gives rise to the ascending colon while the inferior branch meets a dead-end. This small pouch-like structure is known as the ...
