"Based on the authors' wildly popular article in the Huffington Post called "18 Things That Creative People Do Differently" (which generated 5 million views and 500,000 Facebook shares in one week), this well-researched and engaging book reveals what we know about creativity, and what anyone can do to enhance this essential aspect of their lives and work"--

Discover the ten things highly creative people do differently. Is it possible to make sense of something as elusive as creativity? Based on psychologist Scott Barry Kaufman's groundbreaking research and Carolyn Gregoire's popular article in the Huffington Post, Wired to Create offers a glimpse inside the "messy minds" of highly creative people. Revealing the latest findings in neuroscience and psychology, along with engaging examples of artists and innovators throughout history, the book shines a light on the practices and habits of mind that promote creative thinking. Kaufman and Gregoire untangle a series of paradoxes— like mindfulness and daydreaming, seriousness and play, openness and sensitivity, and solitude and collaboration - to show that it is by embracing our own contradictions that we are able to tap into our deepest creativity. Each chapter explores one of the ten attributes and habits of highly creative people: Imaginative Play * Passion * Daydreaming * Solitude * Intuition * Openness to Experience * Mindfulness * Sensitivity * Turning Adversity into Advantage * Thinking Differently With insights from the work and lives of Pablo Picasso, Frida Kahlo, Marcel Proust, David Foster Wallace, Thomas Edison, Josephine Baker, John Lennon, Michael Jackson, musician Thom Yorke, chess champion Josh Waitzkin, video-game designer Shigeru Miyamoto, and many other creative luminaries, Wired to Create helps us better understand creativity – and shows us how to enrich this essential aspect of our lives.

Is it possible to make sense of something as elusive as creativity? Creativity works in mysterious ways, with inspiration often arising out of nowhere - and then failing to show up when we need it most! Combining the latest findings in neuroscience and psychology with original research, Dr Kaufman and Carolyn Gregoire dig deeper than ever before into the creative mind. Taking us on a fascinating journey that unpacks the creative genius layer by layer, they reveal what creativity is, what creative people do differently and what we can all learn from this. With insights from some of the greatest creative minds in history, including Pablo Picasso, Marcel Proust, David Foster Wallace and Frida Kahlo, Wired to Create shows that we all have access to creative achievement and that, in essence, we are all wired to create.

* Our summary is short, simple and pragmatic. It allows you to have the essential ideas of a big book in less than 30 minutes. *As you read this summary, you will discover the top ten traits that characterize the most creative minds. *You will also discover that : creative minds are inhabited by paradoxes, essential to creativity; sensitivity, marginality, strong intuition or intellectual flexibility are among the common traits found in most creative people; an individual's brain reveals as many clues about his or her creative abilities as a psychological test, because the two approaches are complementary. *Open-minded, tolerant, sensitive, adventurous, atypical, etc., are all traits that characterize creative people. What is most surprising in all this is the complexity and disorder that reign in their minds and the many contradictions that compose them. Creativity has many facets and to understand them, we must first study the brain; creative people have a great facility to activate and deactivate certain neural networks, which they use to create. However, don't worry, creativity can also be learned! *Buy now the summary of this book for the modest price of a cup of coffee!

Child prodigies. Gifted and Talented Programs. Perfect 2400s on the SAT. Sometimes it feels like the world is conspiring to make the rest of us feel inadequate. Those children tapped as possessing special abilities will go on to achieve great things, while the rest of us have little chance of realizing our dreams. Right? In Ungifted, cognitive psychologist Scott Barry Kaufman—who was relegated to special education as a child—sets out to show that the way we interpret traditional metrics of intelligence is misguided. Kaufman explores the latest research in genetics and neuroscience, as well as evolutionary, developmental, social, positive, and cognitive psychology, to challenge the conventional wisdom about the childhood predictors of adult success. He reveals that there are many paths to greatness, and argues for a more holistic approach to achievement that takes into account each young person's personal goals, individual psychology, and developmental trajectory. In so doing, he increases our appreciation for the intelligence and diverse strengths of prodigies, savants, and late bloomers, as well as those with dyslexia, autism, schizophrenia, and ADHD. Combining original research, anecdotes, and a singular compassion, Ungifted proves that anyone—even those without readily observable gifts at any single moment in time—can become great.

The Psychology of Creative Writing takes a scholarly, psychological look at multiple aspects of creative writing, including the creative writer as a person, the text itself, the creative process, the writer's development, the link between creative writing and mental illness, the personality traits of comedy and screen writers, and how to teach creative writing. This book will appeal to psychologists interested in creativity, writers who want to understand more about the magic behind their talents, and educated laypeople who enjoy reading, writing, or both. From scholars to bloggers to artists, The Psychology of Creative Writing has something for everyone.

What are the origins of greatness? Few other questions have caused such intense debate, controversy, and diversity of opinions. In recent years, a large body of research has accumulated that suggests that the origins of greatness are extraordinarily complex. Instead of talent or practice, it's talent and practice. Instead of nature or nature, it's nature via nurture. Instead of practice, it's deliberate practice. Instead of the causes of greatness in general, it's the determinants of greatness specific to a field. The Complexity of Greatness brings together a variety of perspectives and the most cutting-edge research on genes, talent, intelligence, expertise, deliberate practice, creativity, prodigies, savants, passion, and persistence. A variety of different domains are represented, including science, mathematics, expert memory, acting, visual arts, music, and sports. This book demonstrates that the truth about greatness is far more nuanced, complex, and fascinating than any one viewpoint or paradigm can possibly reveal. Indeed, it suggests that the time has come to go beyond talent or practice: Greatness is much, much more.

In an educational system founded on rigid standards and categories, students who demonstrate a very specific manifestation of intelligence flourish, while those who deviate tend to fall between the cracks. Too often, talents and interests that do not align with classroom conventions are left unrecognized and unexplored in children with extraordinary potential but little opportunity. For twice-exceptional (2e) children, who have extraordinary strengths coupled with learning difficulties, the problem is compounded by the paradoxical nature of their intellect and an unbending system, ill-equipped to cater to their unique learning needs. Twice Exceptional: Supporting and Educating Bright and Creative Students with Learning Difficulties provides cutting-edge, evidence-based approaches to creating an environment where twice-exceptional students can thrive. Viewing the 2e student as neither exclusively disabled nor exclusively gifted, but, rather, as a dynamic interaction of both, leading experts offer holistic insight into identification, social-emotional development, advocacy, and support for 2e students. With chapters focusing on special populations (including autism, dyslexia, and ADHD) as well as the intersection of race and 2e, this book highlights practical recommendations for school and social contexts. In expounding the unique challenges faced by the 2e population, Twice Exceptional makes a case for greater flexibility in our approach to education and a wider notion of what it means to be academically successful.

A bold reimagining of Maslow's famous hierarchy of needs—and new insights for realizing your full potential and living your most creative, fulfilled, and connected life. When psychologist Scott Barry Kaufman first discovered Maslow's unfinished theory of transcendence, sprinkled throughout a cache of unpublished journals, lectures, and essays, he felt a deep resonance with his own work and life. In this groundbreaking book, Kaufman picks up where Maslow left off, unraveling the mysteries of his unfinished theory, and integrating these ideas with the latest research on attachment, connection, creativity, love, purpose and other building blocks of a life well lived. Kaufman's new hierarchy of needs provides a roadmap for finding purpose and fulfillment—not by striving for money, success, or happiness, but by becoming the best version of ourselves, or what Maslow called self-actualization. While self-actualization is often thought of as a purely individual pursuit, Maslow believed that the full realization of potential requires a merging between self and the world. We don't have to choose either self-development or self-sacrifice, but at the highest level of human potential we show a deep integration of both. Transcend reveals this level of human potential that connects us not only to our highest creative potential, but also to one another. With never-before-published insights and new research findings, along with exercises and opportunities to gain insight into your own unique personality, this empowering book is a manual for self-analysis and nurturing a deeper connection not only with our highest potential but also with the rest of humanity.
